Odessa, Ukraine

TECH SKILLS

- Python
- Claude Code
- Cursor
- AI Agents
- JavaScript
- TypeScript
- Django
- FastAPI
- Docker
- React
- PyQt6
- PotgreSQL
- MongoDB
- Redis
- SQLAlchemy
- HTML/CSS
- Alembic
- Websockets

SOFT SKILLS

- Teamwork
- Conscientiousness
- Responsibility
- Desire to learn
- Problem solving
- Optimism
- Critical thinking

LANGUAGES

- English - pre-intermediate
- Ukrainian - native

SUMMARY

Full-stack developer (Python/FastAPI, React/TypeScript) with 2+ years of commercial experience, now Lead Developer of a small team of 3 developers. I build a crypto futures trading platform: a distributed system of 10+ microservices covering market-data streaming, strategy simulation and live portfolio execution. I deliver production code with AI agents (Claude Code, Cursor) as a core part of the workflow, using them for design, implementation, debugging, review and testing, with strict architecture, lint and testing rules around them.

WORK EXPERIENCE

Lead Developer — TWB | Jan 2026 – Present Full-Stack Developer — TWB | Jan 2025 – Jan 2026 Crypto futures trading platform (real-time data, simulation, live trading).

As Lead Developer (team of 3 developers):

- Lead architecture decisions, task breakdown, code review and delivery for the platform.
- Set engineering standards: layered architecture rules, mandatory lint, format and type checks in CI, targeted testing.
- Introduced AI-assisted workflows (Claude Code, Cursor, specialised review and test agents) as a team practice.
- Led the migration of a legacy monolithic stack into a lean production set of services, in small verified steps.

As Developer and Lead:

- Develop and maintain a distributed system of 10+ microservices (FastAPI, PostgreSQL, Redis, WebSockets): market-data streamers, strategy simulation engine, live portfolio execution, web frontend.
- Designed inter-service communication over Redis pub/sub and shared schemas. Services read market bars directly from PostgreSQL in read-only mode to keep the pipeline consistent.
- Built the React/TypeScript frontend for real-time trading: live prices, order-book data, analytics dashboards. It is responsive and mobile-first, on a shared design system.
- Own deployment and operations: Render, Vercel, Docker, GitHub Actions, Sentry.

AI-assisted engineering (daily practice)

- Use Claude Code and Cursor across the full cycle: architecture analysis, implementation, refactoring, debugging, test writing and pre-deploy review.
- Built agent workflows: project rules and context maps, specialised sub-agents (architecture guard, code reviewer, test writer, secrets scanner), targeted tests only.
- Keep AI output under control: layer-boundary checks, mandatory linting and type checks, human review before every merge.

Python Developer — Tekra | Apr 2024 – Jan 2025

- Built desktop applications in PyQt6 and backends in FastAPI: WebSockets for real-time communication, JWT authentication, secure data handling.

Python Backend Developer — Vsiprobihy | Sep 2024 – Jan 2025 (part-time)

- Built a web platform for organising and managing running events across Ukraine.
- Redesigned the database schema and optimised queries for faster responses and better scalability.

Freelance Python Developer — Nasha-firma.od.ua | Sep 2023 – May 2024

- Built Django web applications with authentication, role-based authorisation and secure sessions.
- Optimised PostgreSQL through indexing, normalisation and query tuning.
-

TECH SKILLS

- Backend: Python, FastAPI, Django, SQLAlchemy, Alembic, WebSockets, JWT
- Frontend: TypeScript, JavaScript, React, HTML/CSS
- Data & messaging: PostgreSQL, Redis (pub/sub), MongoDB
- DevOps: Docker, GitHub Actions, Render, Vercel, Sentry
- AI tooling: Claude Code, Cursor, AI agents and sub-agents, prompt/context engineering
- Leadership: architecture, code review, task planning, mentoring
- Desktop: PyQt6
-

EDUCATION & COURSES

- GoIT: JavaScript Full-Stack (2024); Python Web (2022–2023); Python Data Science (2023)
- Hillel: Python Core (2022)
